CLUB PISCINE 

## Foundation requirements

Our sauna is designed to be installed on a variety of foundation types — including stone pavers, concrete slabs, or even wood platforms.

For a safe and long-lasting installation, the **sauna must be placed on a flat, level surface**:

The sauna features a stepped-in base floor, designed to sit slightly inside the wall structure.

This smart design helps prevent water infiltration from rain. However, it's important to **avoid placing the sauna in areas that collect moisture or standing water**, such as grass, dirt, or low spots where puddles may form.

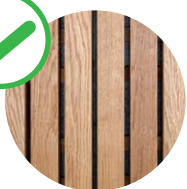

### Visscher recommends

Concrete pads

Stone pavers

Wood decks

### Avoid

Sand/Dirt

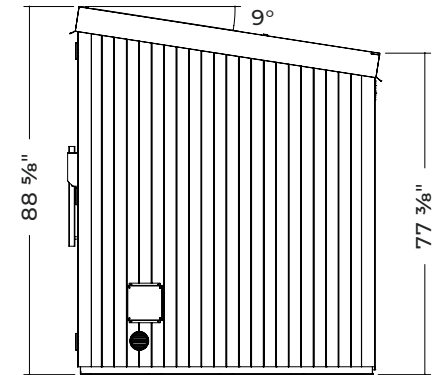

Grass

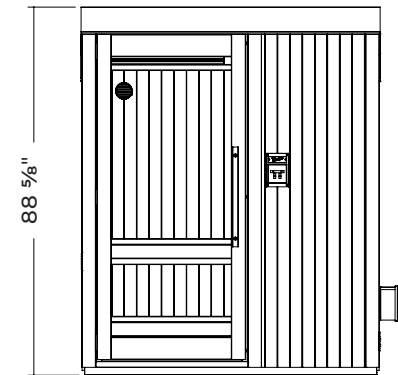

Low spots
